Location: Hall A

Abstract Number: 3530

Investigator-Sponsored Trial at the University of Colorado Cancer Center

Copies of the presentations will be available on the [Publications](#) section of ALX Oncology's website following presentation at the meeting.

About ALX Oncology

ALX Oncology is a publicly traded, clinical-stage immuno-oncology company focused on helping patients fight cancer by developing therapies that block the CD47 immune checkpoint inhibitor and bridge the innate and adaptive immune system. ALX Oncology's lead product candidate, evorpaccept, is a next generation CD47 blocking therapeutic that combines a high-affinity CD47 binding domain with an inactivated, proprietary Fc domain. To date, evorpaccept has been dosed in over 500 subjects and has demonstrated promising activity and favorable tolerability profile across a range of hematologic and solid malignancies in combination with various leading anti-cancer antibodies. ALX Oncology is currently focusing on combining evorpaccept with anti-cancer antibodies, antibody-drug conjugates ("ADCs"), and PD-1/PD-L1 immune checkpoint inhibitors.
